

The Future X Network: Building the digital fabric for making cities smarter and better together

Industry Summit 2017, Oulu, 6 Oct 2017

Dr. Seppo Yrjölä
Nokia Corporate Strategy & Development

Ways to save/create time

- 1) **Change Time:** Use differences in gravity and velocity
- 2) **Change Lifetime:** Discover “Fountain of Youth” or bioengineered equivalent
- 3) **Change Usage of Time:** This talk

2 © 2017 Nokia

Human value: Time

Thinking time....

$$\uparrow s^{-1} \rightarrow t \downarrow$$

X 100

X 500

X 1000

X 5000

We have continuously created tools to augment our physical abilities...and save time

Thinking time....

↑ D → t ↓ ↑

Google

amazon

X 10 - X 1000 ?

We have created tools to increase discovery to save time (and waste time?)

Star Trek thinking time....

Communicator

Holodeck

Replicator

Smartphone

Virtual Reality

3D Printer

↓ d, E → ↓ t

Decreasing distance to reduce waste/energy and save time

Star Trek thinking time....

Transporter

Tricorder

$$\downarrow d, K \uparrow \rightarrow \downarrow t$$

Should decrease distance and increase knowledge to save time...but this remains to be done

Thinking time....

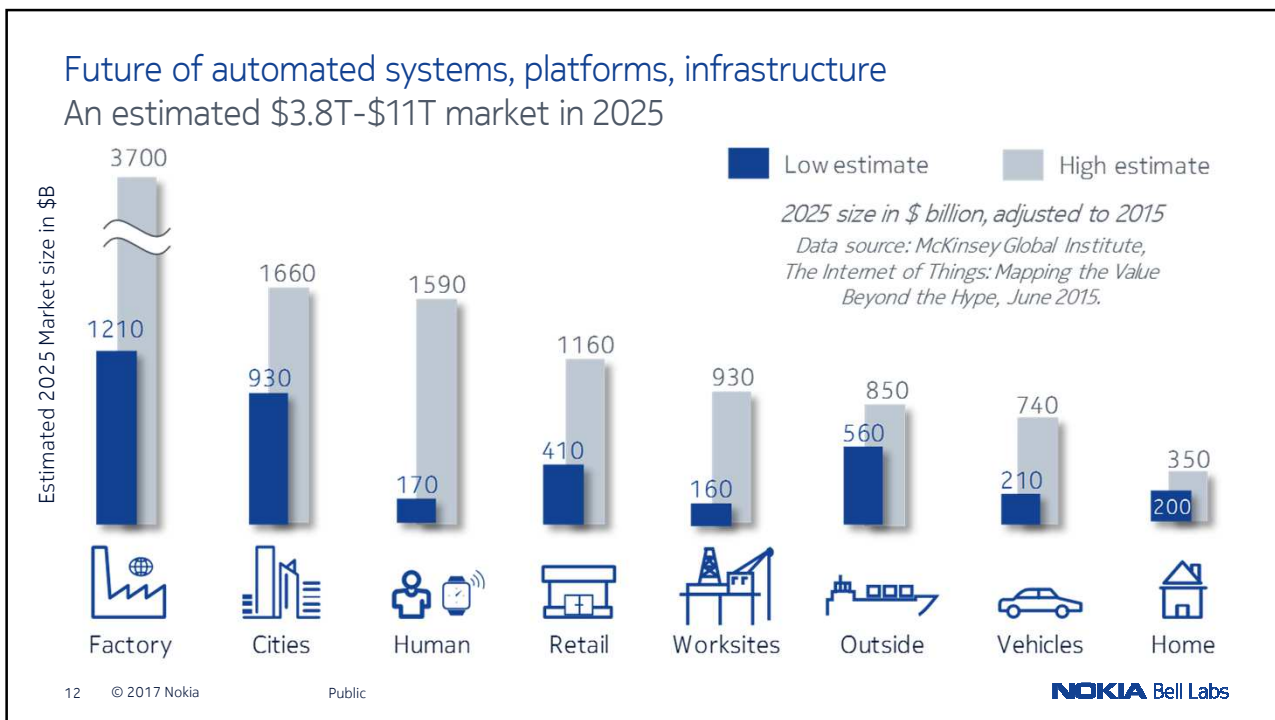

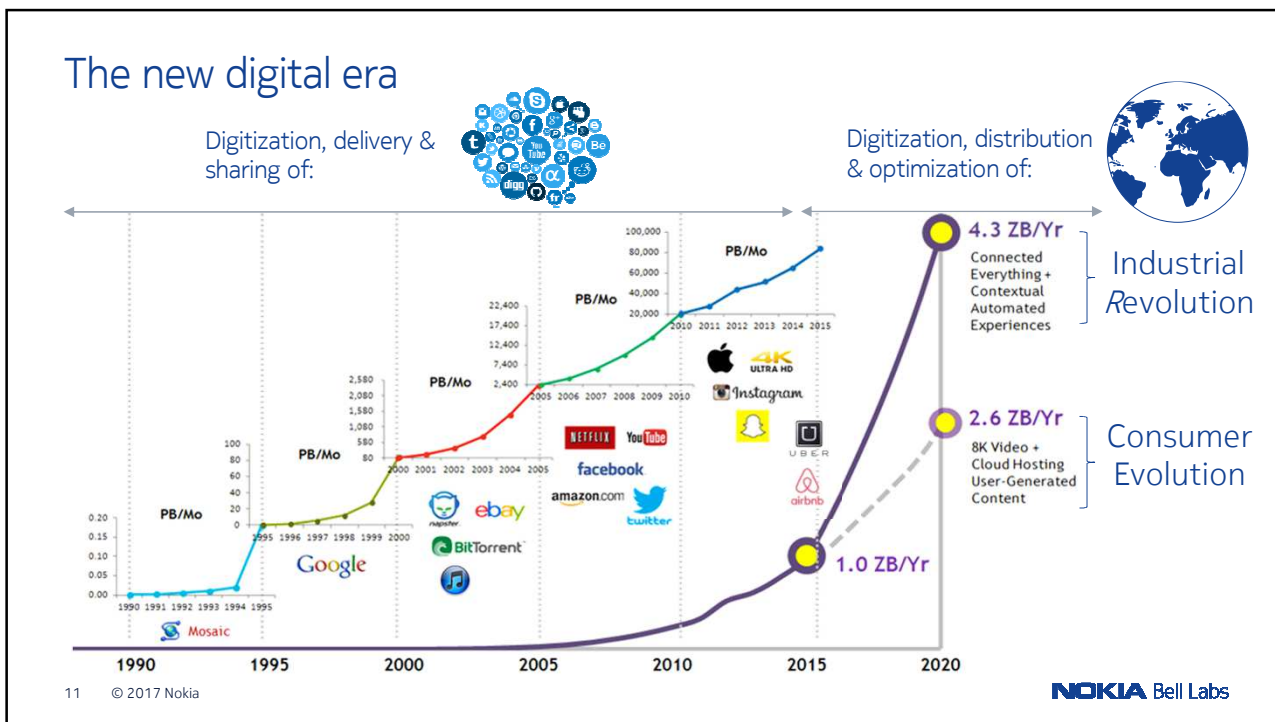

Need to interface digital & physical realms...to decrease distance and waste, and create time

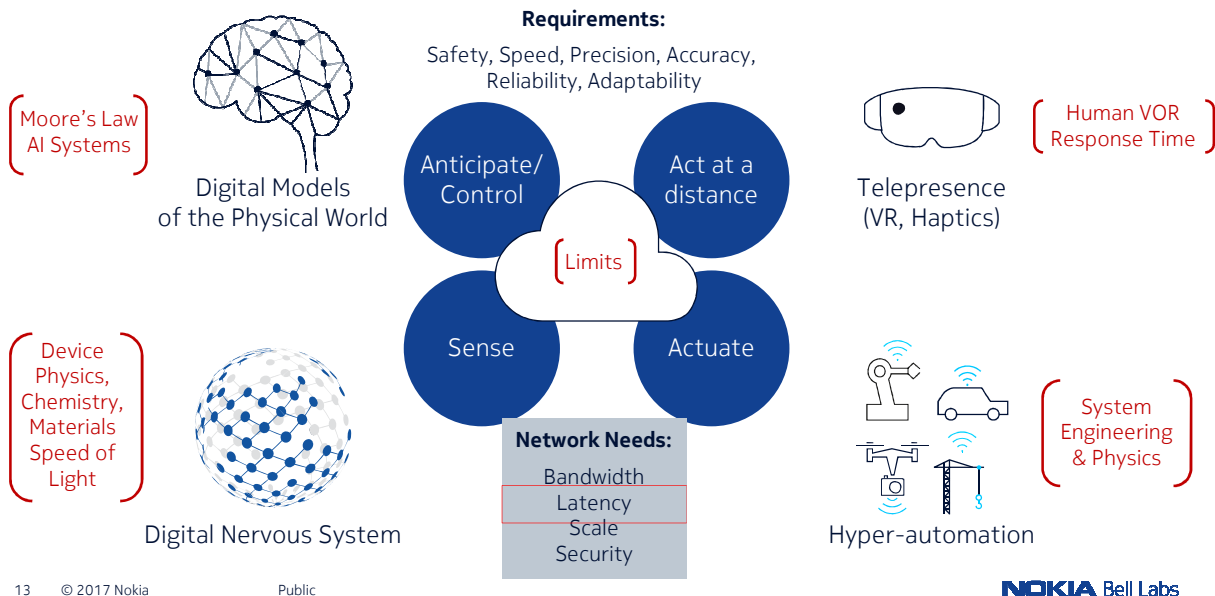

The revolution

Tech. Revolution	Enabling Technology	Connectivity
Financial (1600 – 1740)	Stocks & Bonds	Banking & Stock Market Infrastructure
1 st Industrial (1780 – 1840)	Steam Engine & Iron Production	Rail and Shipping Networks
2 nd Industrial (1880 – 1920)	Steel & Chemicals	Extended Transportation Networks Electricity & Telecom Networks
Scientific-Technical (1940 – 1970)	Analog & Digital Signal processing	Digital Communications Network
Information (1985 – 2015)	The Web, Cloud computing & Mobile devices	Internet & Broadband Access
Automation of Everything (2015 –)	Digital interfaces & Data analysis	Future X Network

We are here

Control blocks of industrial robot automation

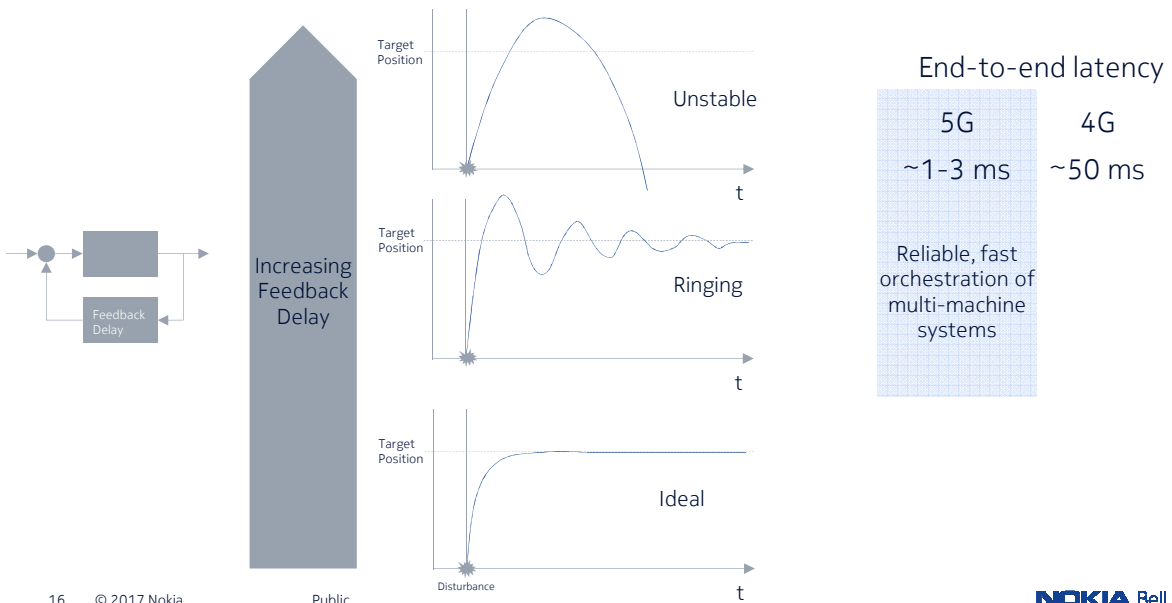

Latency matters ... reducing time to save time

Location Precision

		Distance Traveled		
Speed		1 ms	10 ms	100 ms
	1 m/s	1 mm	1 cm	10 cm
	120 km/h	3.4 cm	34 cm	3.4 m
	100 km/h	2.8 cm	28 cm	2.8 m

Feedback delay and system stability

Platoon Collision Avoidance

Networked acceleration, steering and braking control (inter-vehicular sensing and actuator control)

Latency of 1 ms vs 100 ms @ 100 kmph provides additional safety margin of ~½ car length

17 © 2017 Nokia Public **NOKIA** Bell Labs

Industrial Automation

High accuracy (μm to mm tolerance)

Laser Cutting

Industrial robotic control uses wired communications (e.g. SERCOS)

- Latencies < 1 ms
- 10^{-8} reliability

5G opportunity

Laser Welding

Laser welding system for ships (Meyerwerft)

- 30 axes for seam weld control
- Speed ~ 10 m/min
- Track radius ~40 mm
- Track accuracy ~ 50 μm

Multiple degrees of freedom in articulation

- Milliradian error can cause inaccuracies of several mm

Factories of the future will be enabled by untethered robots providing flexibility, speed and accuracy

18 © 2017 Nokia Public **NOKIA** Bell Labs

Position Accuracy

GPS accuracy ~ few meters
 Limited to outdoor scenarios
 Limited by large obstacles

Accurate positioning from external sensors

Future networks will enable applications demanding accuracies from few meters down to millimeters

Accurate positioning (observability), controllability and reachability are key in industrial automation/control, transportation, supply chain logistics

Putting 5G's millisecond delays to work

Industrial Robotics

Cooperative Collision Avoidance

3D Printing - Construction

Cooperative Robot Control

Cooperative Drone Control

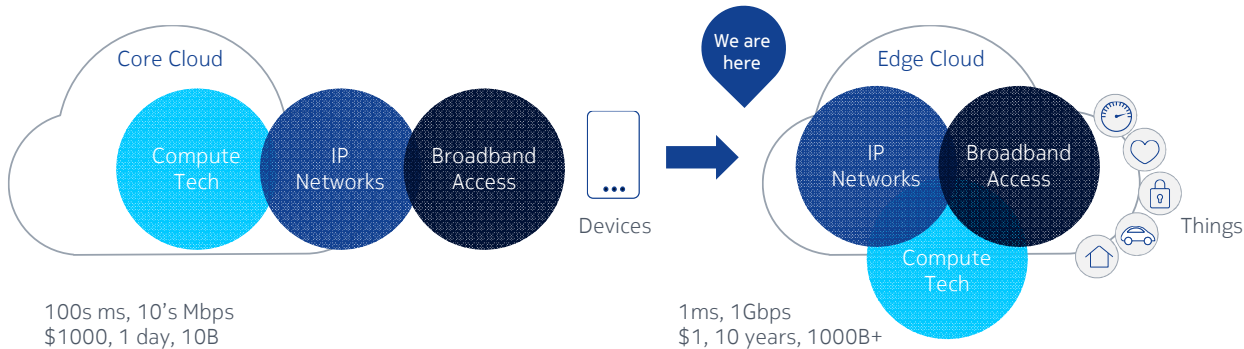

Teleoperation

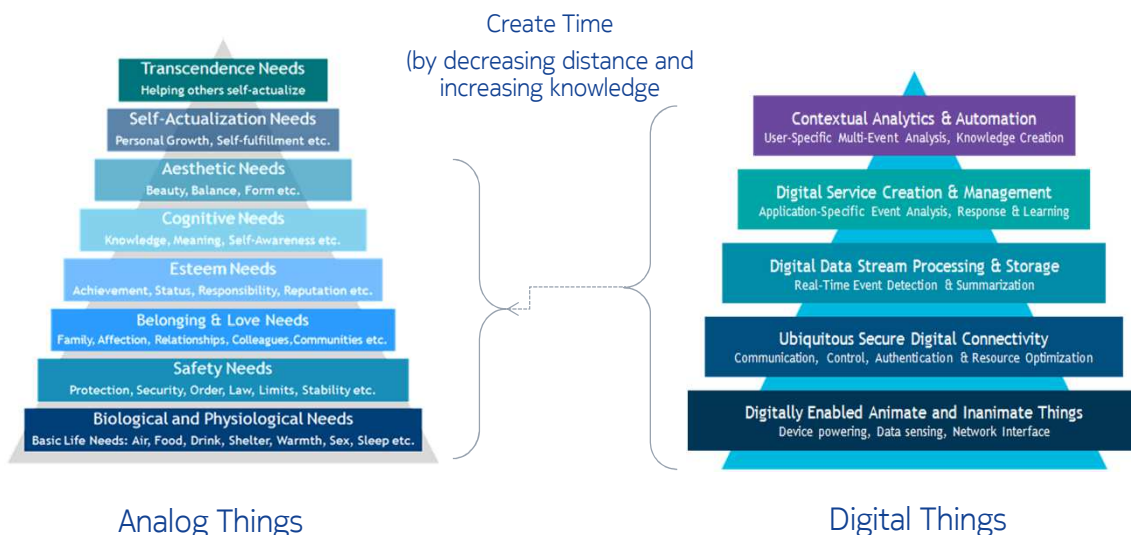

The New Network: a 100 year - 100x shift

From consumer driven, centralized network

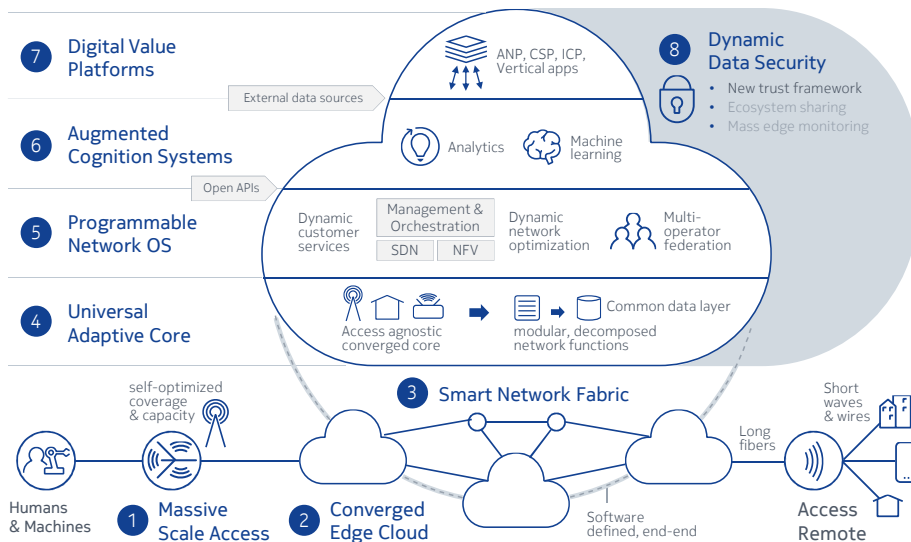

To enterprise driven, distributed network
